Q1: genl support

A. - Oregon, Washington, NW in general different than most states as Federal govt controls headwater lands in genl
- AZ, tribes tend to control headwater lands - collaboration sometimes fairly non-existent - more emphasis for tribes
- need to avoid ngt by litigation
- policy long overdue - different fed agencies have occasionally "pulled the rug" out from other agencies in "turf" wars

B. Need to pursue mediation/arbitration of existing misunderstandings/disagreements/barriers
fishability & swimmable & drinkability

C. Engineering Practices
Funding
Partners

2A. - Dealing with independent tribes creates multiple priorities - difficult to get collective agreement
- other states need to make clean water a priority
- legislate priorities
- flexibility of funding - sharing $ across agency & jurisdictional boundaries - pool funds/share burden
- target the most serious problems
- sharing expertise & budget
- more global outlook on agency budgeting

3A. - Collaboration - How are we going to know the goal has been reached. - Need a clear vision
- Funding participation related to collaboration/participation
- Need method of measuring success (step-by-step)
- Better communication w/public to get participation & support

B. Roadless policy meeting - getting the word out
- Coquille Forest - Fed govt got word out - Tribes brought money
- legislate it - command it - withhold funding for other programs if not followed - Fund it!
- Oregon Plan

3c
- Implementation
- Collaborate with Tribes
- communication
- Is this an effort to attempt to get all agencies to work together as one?
